LOGSENTRY

Security Investigation Report

Generated: 2026-11-10T19:39:10.756405+00:00

Report version: 1.0

1. Executive Summary

This report summarizes the results of LogSentry log analysis. It includes parsed events, security detections, MITRE ATT&CK mappings, and correlated incident information.

Metric	Result
Authentication Events	7
Apache Events	7
Firewall Events	6
Total Events	20
Brute Force Alerts	1
Port Scan Alerts	1
Web Path Alerts	1
Total Security Alerts	3
Correlated Incidents	0

2. Security Alert Details

Alert 1: SSH Brute-Force Attempt

Field	Value
Severity	Medium
Source IP	203.0.113.50
Failed Attempts	5
First Seen	2026-11-10T09:15:22
Last Seen	2026-11-10T09:15:46
Description	5 failed SSH login attempts from 203.0.113.50 within 60 seconds.

Alert 2: Possible Port Scan

Field	Value
Severity	Medium
Source IP	203.0.113.70

Field	Value
Destination Ip	192.168.1.100
Distinct Ports	5
Destination Ports	22, 80, 443, 3389, 8080
First Seen	2026-11-10T10:00:01
Last Seen	2026-11-10T10:00:05
Actions	BLOCK
Description	203.0.113.70 targeted 5 distinct destination ports on 192.168.1.100 within 60 seconds.

Alert 3: Possible Web Path Reconnaissance

Field	Value
Severity	Medium
Source IP	203.0.113.60
Distinct Paths	4
Suspicious Paths	/.env, /admin, /phpmyadmin, /wp-config.php
Request Count	4
First Seen	2026-11-10T09:35:00+00:00
Last Seen	2026-11-10T09:35:06+00:00
Description	203.0.113.60 requested 4 distinct suspicious web paths within 60 seconds.

3. MITRE ATT&CK Technique Mapping

Detection	Technique	Technique ID	Tactic
SSH Brute-Force Attempt	Brute Force: Password Guessing	T1110.001	Credential Access
Possible Port Scan	Network Service Discovery	T1046	Discovery
Possible Web Path Reconnaissance	Active Scanning: Wordlist Scanning	T1595.003	Reconnaissance

T1110.001: Repeated failed SSH password authentication attempts are consistent with password guessing activity.

T1046: Attempts to reach multiple destination ports may indicate network service discovery.

T1595.003: Requests for multiple sensitive or commonly targeted web paths are consistent with wordlist-based reconnaissance.

4. Correlated Incident Investigation

No correlated incidents were identified in this analysis. The alerts remain separate because the current sample logs contain different source IP addresses.

5. Investigation Limitations and Disclaimer

- Security alerts indicate potentially suspicious activity; they do not prove that a system was compromised.
- A shared source IP, NAT gateway, or proxy can represent multiple different users or devices.
- Missing, incomplete, or incorrectly timestamped logs can affect detection and event correlation.
- MITRE ATT&CK mappings provide behavioral context and do not confirm attacker identity or intent.
- This report is based only on the log records supplied to LogSentry.

LogSentry is a log analysis and investigation support tool. Findings should be validated against additional authorized evidence before drawing conclusions.
