LOGSENTRY

Security Investigation Report

Generated: 2026-11-11T21:49:30.339132+00:00

Report version: 1.0

1. Executive Summary

This report summarizes the results of LogSentry log analysis. It includes parsed events, security detections, MITRE ATT&CK mappings, and correlated incident information.

Metric	Result
Authentication Events	5
Apache Events	4
Firewall Events	5
Total Events	14
Brute Force Alerts	1
Port Scan Alerts	1
Web Path Alerts	1
Total Security Alerts	3
Correlated Incidents	1

2. Security Alert Details

Alert 1: SSH Brute-Force Attempt

Field	Value
Severity	Medium
Source IP	203.0.113.99
Failed Attempts	5
First Seen	2026-11-12T09:15:12
Last Seen	2026-11-12T09:15:36
Description	5 failed SSH login attempts from 203.0.113.99 within 60 seconds.

Alert 2: Possible Port Scan

Field	Value
Severity	Medium
Source IP	203.0.113.99

Field	Value
Destination Ip	192.168.1.100
Distinct Ports	5
Destination Ports	22, 80, 443, 3389, 8080
First Seen	2026-11-12T09:16:01
Last Seen	2026-11-12T09:16:05
Actions	BLOCK
Description	203.0.113.99 targeted 5 distinct destination ports on 192.168.1.100 within 60 seconds.

Alert 3: Possible Web Path Reconnaissance

Field	Value
Severity	Medium
Source IP	203.0.113.99
Distinct Paths	4
Suspicious Paths	/.env, /admin, /phpmyadmin, /wp-config.php
Request Count	4
First Seen	2026-11-12T09:17:01+00:00
Last Seen	2026-11-12T09:17:07+00:00
Description	203.0.113.99 requested 4 distinct suspicious web paths within 60 seconds.

3. MITRE ATT&CK Technique Mapping

Detection	Technique	Technique ID	Tactic
SSH Brute-Force Attempt	Brute Force: Password Guessing	T1110.001	Credential Access
Possible Port Scan	Network Service Discovery	T1046	Discovery
Possible Web Path Reconnaissance	Active Scanning: Wordlist Scanning	T1595.003	Reconnaissance

T1110.001: Repeated failed SSH password authentication attempts are consistent with password guessing activity.

T1046: Attempts to reach multiple destination ports may indicate network service discovery.

T1595.003: Requests for multiple sensitive or commonly targeted web paths are consistent with wordlist-based reconnaissance.

4. Correlated Incident Investigation

Incident: INC-001

Source IP: 203.0.113.99
Alert count: 3
First seen: 2026-11-12T09:15:12+00:00

Last seen: 2026-11-12T09:17:07+00:00
Description: 3 different detection types were observed from 203.0.113.99 within 300 seconds.

Chronological Attack Timeline

Timestamp (UTC)	Event	Severity	Description
2026-11-12T09:15:12+00:00	SSH Brute-Force Attempt	Medium	5 failed SSH login attempts from 203.0.113.99 within 60 seconds.
2026-11-12T09:16:01+00:00	Possible Port Scan	Medium	203.0.113.99 targeted 5 distinct destination ports on 192.168.1.100 within 60 seconds.
2026-11-12T09:17:01+00:00	Possible Web Path Reconnaissance	Medium	203.0.113.99 requested 4 distinct suspicious web paths within 60 seconds.

5. Investigation Limitations and Disclaimer

• Security alerts indicate potentially suspicious activity; they do not prove that a system was compromised.

• A shared source IP, NAT gateway, or proxy can represent multiple different users or devices.

• Missing, incomplete, or incorrectly timestamped logs can affect detection and event correlation.

• MITRE ATT&CK mappings provide behavioral context and do not confirm attacker identity or intent.

• This report is based only on the log records supplied to LogSentry.

LogSentry is a log analysis and investigation support tool. Findings should be validated against additional authorized evidence before drawing conclusions.
